Format Tags

HTML formatting tags are essential tools for web developers and designers. They enhance the readability and appearance of text on web pages. These tags apply specific styles and formatting to text, making content more engaging and easier to understand.

IV **by IT Vedant**

Bold and Strong Emphasis

<b> Tag

Used for stylistic bolding without indicating extra importance. Renders text in a bold typeface.

<strong> Tag

Indicates text of strong importance. Browsers typically render this as bold, but it carries semantic meaning.

Italic and Emphasis

1 <i> Tag

Used for stylistic italics without indicating emphasis. Renders text in an italic typeface.

2 <em> Tag

Indicates emphasized text. Browsers typically render this as italic, but it carries semantic meaning.

3 Use Cases

Ideal for titles, quotes, or phrases that need visual distinction or stress in the text flow.

Underline, Insert, and Delete
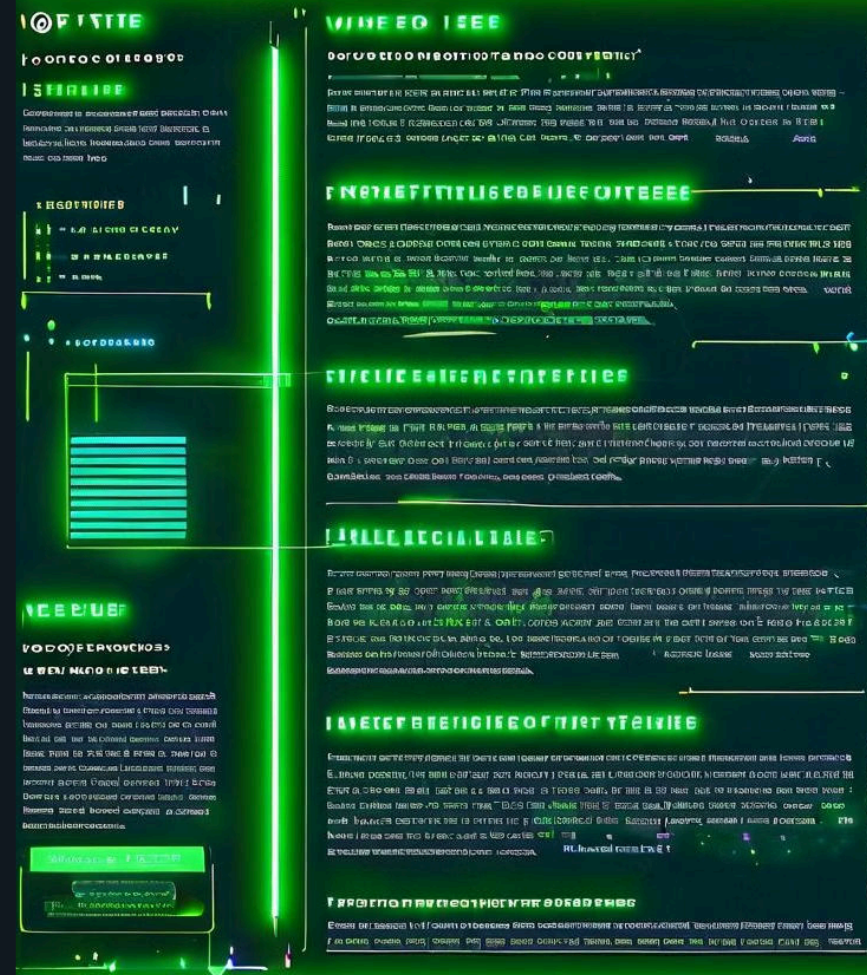

<u> Tag

Underlines text without semantic meaning. Use sparingly to avoid confusion with hyperlinks.

<ins> Tag

Indicates inserted text. Usually rendered with an underline, signifying added content.

<del> Tag

Indicates deleted or removed text. Typically rendered with a line through it (strikethrough).

Highlight and Small Text

<mark> Tag

Highlights text as if marked with a highlighter pen. Useful for emphasizing key points.

<small> Tag

Renders text in a smaller font size. Ideal for fine print or less important information.

Styling Options

Both tags can be further customized with CSS for more precise visual control.
